

ACE Reports: New Mandatory Prompt for Company ACE ID

Last updated: May 2, 2024

U.S. Customs and Border Protection (CBP) will begin requiring trade community users to identify the subject company whenever a report is run or scheduled in Automated Commercial Environment (ACE) Reports. **All existing scheduled reports will need to be updated after this change has taken effect, or the scheduled reports will fail.** This change will be rolled out to ACE Reports data universes from May to August 2024, beginning with the Importer Security Filing (ISF) universe on **Thursday, May 16, 2024**. A calendar of when the change will take effect in each universe is below.

Why is this change being made?

- Eliminates a data security vulnerability for **all** trade community users that can occur when ACE users with scheduled reports change companies.
- Restores the ability for trade community users with access to more than one account to schedule reports for delivery to e-mail addresses and shared folders.
- Enables trade community users with access to more than one account to run reports for any company to which they are connected without logging out and logging back in. (Logging out and logging back in will still be necessary when switching account type.)

What will trade community users need to do?

- When running or scheduling a standard, customized, or ad-hoc report, all trade community users must select the ACE ID of the subject company from a new, mandatory prompt labeled “Trade Account ACE ID”.
 - Users with access to multiple accounts will be able to select from a list of IDs.

- After this update is applied to a data universe, all currently-scheduled reports using that universe will fail because no ACE ID has been provided.
- Users should access ACE Reports and create new scheduling for any affected reports. This will automatically prompt the user to provide the appropriate ACE ID in the new mandatory prompt.
- Corrected scheduling cannot be created for reports until the data universe it uses has been affected by this change. This enhancement will first be applied to the Importer Security Filing (ISF) data universe. The schedule for the remaining universes is listed below.
