Average Utilization	67%	69%	-2%	-2%

Compared to other major airports ...

An increase in wait times due to increased traffic, but still 44% shorter compared to 2 years ago

- Travel is up at Dallas/Fort Worth.** Traveler volume increased 6% compared to last year. More than half (58%) of DFW passengers are confirmed with automated solutions like Global Entry and APC, compared to 50% last year.
- Increase in booth hours to meet demand.** Booth hours increased 4% compared to a year ago, from 262 hours last year to 274 hours this year.
- Increase in wait times.** Year to date, average wait times increased by 8% (14.7 minutes). More booth hours and faster processing haven't been offset by the increase in traveler volume.
- Cycle time is 3 seconds faster.** APC and Global Entry growth has increased by 16%. Average cycle time (64.7 seconds) this year is down from (67.7 seconds) a year ago, while max hourly throughput increased by 2.5 passengers per booth, per hour.

Traveler Volume ... strong growth

Staffing ... 4% more booths than last year

Wait Time ... significant drop compared to 2013

Cycle Time ... steadily decreasing cycle times

Best Practice Inventory

DFW New FIS Best Practice Assessment: DFW's new terminal has implemented many of the available best practices. Most notably, 58% of passengers are processed by automated technologies like Global Entry and APC. MPC has recently been introduced. APC is available at DFW not only to US Citizens, but also Canadians, Visa Waiver country travelers, and LPRs.

9% GE Traveler %

49% APC Traveler %

0% MPC Traveler % (Actual 0.2012%)

The % of travelers pre-processed by each automated method is shown in the assessment rectangle. Rectangles are shaded green, yellow, or red based on the potential % for each method.

- APC for Canadians
- Section 560/559 Initiative
- APC for Visa Waiver
- Variable Message Signage
- APC for LPR / Nonimmigrants
- One Stop
- Baseline Study Complete
- Express Connect

Legend

- Fully Implemented
- Partially Implemented / Not Available
- Not Implemented

Many innovative practices, technologies, and programs are available to make international air passenger processing more efficient and reduce congestion at airports. If all practices are implemented, an airport may reduce wait times as much as 50 percent compared to not implementing any best practices. A Green "assessment rectangle" indicates the practice is properly and fully implemented; Red means the practice is not in place; and Orange indicates implementation is limited and achieves less than intended results.

13% of passengers wait more than 30 minutes

While very few DFW passengers wait more than 1 hour (about 3%), approximately 13% of passengers wait more than 30 minutes. Between the hours of 8am to Noon, 16% of passengers wait more than 30 minutes.

% Passengers Waiting More than 30 Minutes

Off-peak travel periods have longer waits

Over 2/3 of all daily arrivals occur between Noon and 8pm, yet average waits are higher from 8am to Noon. Opening a few more booths from 8am to Noon could help reduce average waits.

Intraday Volume, Wait Times, and Booth Hours
