ACE Cargo Release Status Notification

The ACE Cargo Release Status Notification chapter contains sections pertaining to status notification messages generated in response to ACE Cargo Release (SE) cargo release processing.

Processing Results

The processing results notify an automated ACE Cargo Release filer of the release status of an SE and whether an AMS bill of lading has been matched to the SE, e.g. “On File” or “Not On File”. Problems typically occur if the bill number submitted with the SE data is incorrect, not on file, or is qualified with a bill type (House or Simple) that does not match what in AMS.

Input: There are no ACE Cargo Release Status Notification input records.

Output: Record Identifiers SO10, SO30, SO40, and SO50 are the mandatory output records.

The application identifier on Record Identifier B is SO. For additional information on Record Identifier B, refer to the Application Control chapter of this publication.

Record Layout Key

This sub-section is copied from **ACE CATAIR Appendix Q, dated July 10, 2013**, and provides the record layout key for ACE ABI CATAIR chapters. It describes the columns of the record layout definitions contained in ACE ABI CATAIR chapters. Please note that this key is *different* from the record layout key for the ACS ABI CATAIR.

Data Element:

Contains the name of the reported data field.

Length:

Indicates the maximum, allowed length of the reported data element.

Class:

Defines the domain of values accepted for the data element. The class definition represents the accepted domain to be used in **all** filing scenarios. Class codes are as follows:

- S** = Space ONLY.
- A** = Alphabetic Data. Consists of characters A through Z (uppercase ONLY).
- N** = Numeric Data Only. Consists of numerals 0 through 9.
- (S)N** = Numeric Data Variation. May contain ‘**Numeric Data Only**’ **or** may consist of one or more spaces followed by numerals 0 through 9. Must consist of at least one right justified numeral. This variation of numeric class may be used for amounts, rates, and counts (where specified).
- AN** = Alphanumeric Data. Consists of characters A through Z (uppercase ONLY), numerals 0 through 9, and space.
- D** = Known Date. Consists of numerals 0 through 9 (format MMDDYY).
- X** = Special Data. Consists of characters A through Z (uppercase ONLY), numerals 0 through 9, space, and any other character found on a standard keyboard. The following characters are accepted:

! @ # \$ % ^ & * () - _ = + [{] \ | ; : ‘ “ , < . > / ? ` ~

Generally, the numeric data class is reserved for a data element used as an integer. It may also include a data element used as a sequencer (e.g., a line number).

Generally, any identifier or code is classed as alphanumeric. Note that this would include an identifier or code that may be required to be reported as all numerals.

Position:

Indicates the beginning and ending position, respectively, of the reported data element within the 80-character record.

Designation:

Indicates the reporting requirement as follows:

- M** = Mandatory. A value conforming to the listed class is required in all filing scenarios.
- C** = Conditional. A value conforming to the listed class may or may not be required for a particular filing scenario. The usage notes will describe the specific cases in which the data element is required or not allowed to be reported.
- O** = Optional. A value conforming to the listed class will be conditionally accepted if provided. An optional data element may be subject to validation, however.

Description:

Defines the data element and provides a further description of how it is to be reported. May include a list of acceptable values, an exception or further specification of the data class, and/or various rules regarding format, justification, and truncation.

Note:

Points to a further discussion regarding the reporting of the particular data element.

Additional Record Key Layout Rules

Unused fields, which are defined as numeric, should not be zero-filled. These fields should be space filled or data errors may result.

Data should not be placed in fields defined as filler. If data is present in filler fields, an error message may be system generated.

When transmitting data, all letters must be upper case. While some applications may not return specific error messages when detecting lower-case letters, CBP cannot guarantee the consistency of processing results for data transmitted in lower case.

All data elements are in fixed-length format. If all positions are not filled, the formatting rules are:

Code	Description
A	Left justify and Space fill.
AN	Left justify and Space fill.
N	Right justify and zero-fill.
X	Left justify and Space fill.

Note: Unless otherwise specified, if there is no data to insert in a field, Space fill.

Note 4

If no range is provided, then the single line will be provided in this position and no 'ending tariff position' value will be provided. If a range of lines is returned, the beginning and ending tariff positions will be provided.

The tariff position represents the order of appearance of the HTS in the CATAIR. Trade is expected to map this accordingly.

Note 5

Valid Document Type codes are listed in the SO60, Note 3

Note 6

If a PGA requires an intensive-exam sample or document required status, the following indicators may be provided to trade:

Code	Description
1	Intensive or document required set by CBP on behalf of the agency listed in positions 5-7
2	Intensive or document required set directly by agency listed in positions 5-7

Note 7

Output values for this data field are:

Value	Description
{ <i>Space Fill</i> }	Pre-existing version of PGA Processing Group
01	February 3, 2016 version of PGA Processing Group
02	July 16, 2016 version of PGA Processing Group

Prior to February 3, 2016 the output value for this field is *Space Fill*.

After February 3, 2016, this field will indicate the version of the PGA Processing Group (SO70, SO71, and SO72).

On July 16, 2016, PGA Processing Group Version 02 will be in place. This will include the increase in length for ‘Document Type Code’ from 3AN to 5AN and the removal of the filler, in the SO71 record.

Note 8

In some instances, trade may receive an SO message that includes different PGA Entry and line statuses for the same PGA data on the same line.

In such cases, trade should review the status action time (positions 17-20) and should use the most recent status.

```
SO70FDADEV052616091901DATA UNDER PGA REVIEW      01 00011001      01
SO70FDADEV052616093207MAY PROCEED                 072200011001      01
```

Due to the timing of when PGAs may send reviews and when CBP sends out the SO messaging, it is possible that this may occur, and trade should be aware.
