

**Note: Air Manifest ITN and Export Exception Reporting using CargoIMP**

Please adhere to the following guidelines which have been vetted with IATA (08/20/2014). It is recommended to use the “Other Customs Information” (OCI) Message Line Identifier (MLI) within the FHL message. The “AES” tag will simplify the identification of the AES specific data elements.

Proposed AES filing formats in IATA Cargo IMP OCI for filing of Foreign Trade Regulations (FTR) requiring exporters to file ELECTRONIC EXPORT INFORMATION (EEI) via the Automated Export System (AES).

The examples of the use of the OCI would be used in the FHL messaging standard for consolidations or the OCI of the FWB when there are no consolidations (simple bill).

***See Draft Manifest Appendices document under the ACE Export Manifest Implementation Guides - MMM***
