Compared to other major airports ...

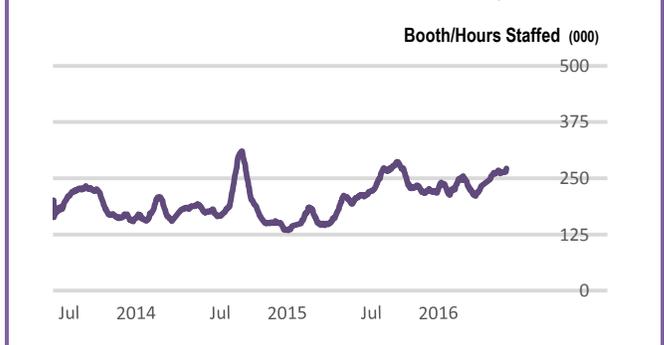

42% more volume, higher waits

- Tremendous growth at Atlanta (Hartsfield) Main.** Traveler volume (year to date) has increased 42% compared to last year. This growth (+3,048 passengers per day) offsets the decline (-2,327) at ATL-F.
- Increased booth hours.** Booth hours at ATL-M are 248 compared to 177 booth hours a year ago, this is a 40% increase.
- Faster processing.** APC, Global Entry, and MPC growth, a 68% USC share have combined to reduce average cycle time. Average cycle time (58.4 seconds) is down from 60.9 seconds a year ago, while potential throughput increased 2.6 passengers per hour, per booth.
- Wait times increased.** Wait times have increased from 9.2 minutes to 10.2 minutes, a 11% increase. Wait times increased due to the substantial growth in traveler volume, but are still the second shortest in the nation.

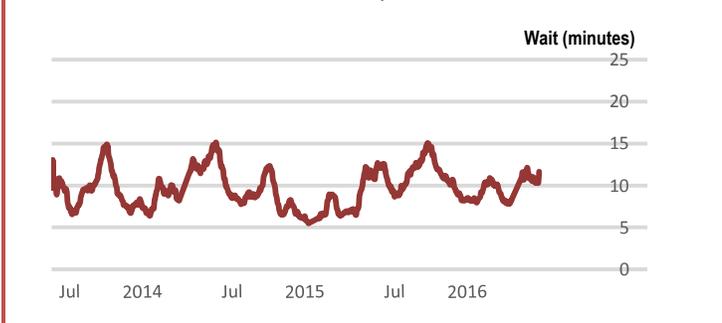

Traveler Volume ... accelerated growth in 2015

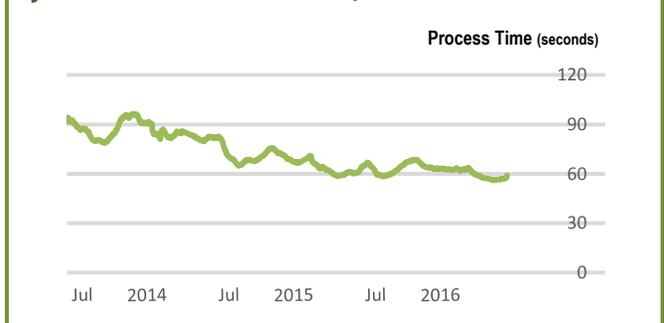

Booth Hours ... 40% more booths than last year

Wait Time ... lowest out of all major terminals

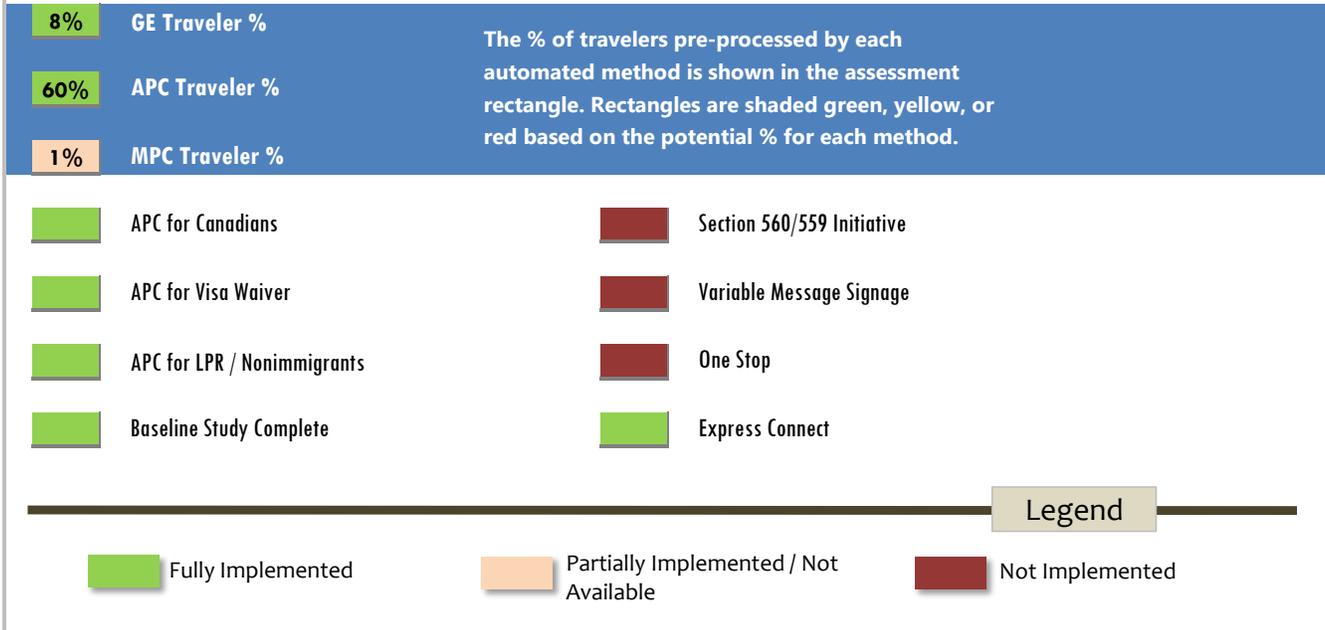

Cycle Time ... much reduced cycle times

Best Practice Inventory

ATL Best Practice Assessment: ATL-M has implemented many of the available best practices that include GE, APC and MPC. Most notably, 69% of ATL passengers are now processed by automated technologies like GE, APC, and MPC. APC is available at ATL not only to US Citizens, but also Canadians, Visa Waiver country travelers, and Lawful Permanent Residents.

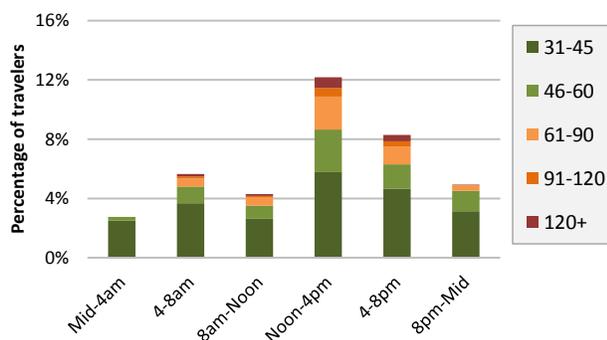

Many innovative practices, technologies, and programs are available to make international air passenger processing more efficient and reduce congestion at airports. If all practices are implemented, an airport may reduce wait times as much as 50 percent compared to not implementing any best practices. A Green "assessment rectangle" indicates the practice is properly and fully implemented; Red means the practice is not in place; and Orange indicates implementation is limited and achieves less than intended results.

9% of passengers wait more than 30 minutes

While very few ATL Main Terminal passengers wait more than 1 hour (about 2%), approximately 9% wait more than 30 minutes. Between the hours of Noon to 4pm, 12% of passengers wait more than 30 minutes.

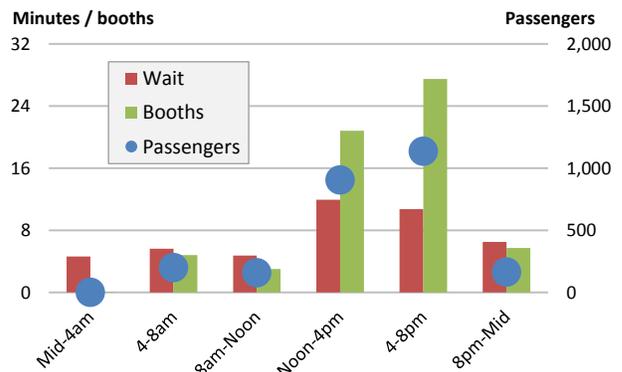

% Passengers Waiting More than 30 Minutes

ATL-M staffs well to peak traffic

ATL-M is busiest between 4pm and 8pm, when over 1,130 passengers arrive per hour. Average wait is just 11 minutes since ATL-M staffs all 27 booths during this period. A few extra booths from Noon to 4pm could reduce average waits.

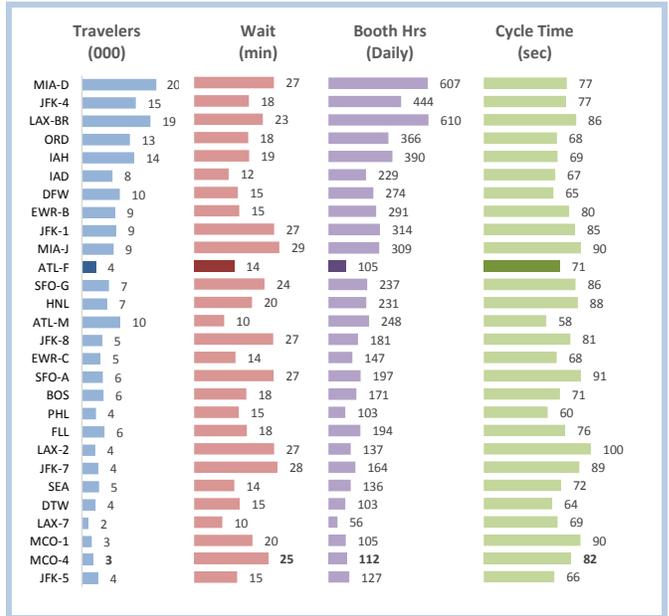

Intraday Volume, Wait Times, and Booth Hours

Compared to other major airports ...

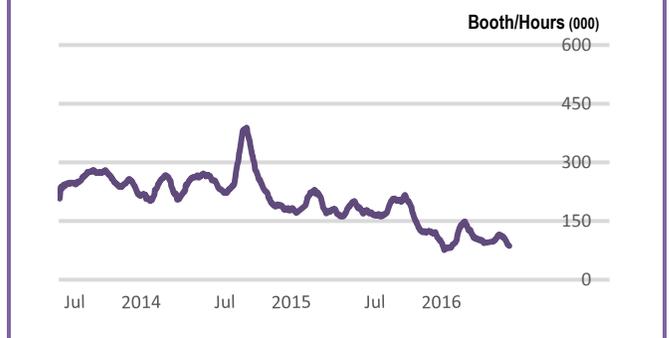

Faster processing and fewer travelers help reduce wait time despite fewer booth hours

- **Travel is down at Atlanta (Terminal F).** ATL traffic continues to migrate from Terminal F (-2,327 passengers a day) to the main terminal (+3,048 passengers a day). Traveler volume at ATL-F decreased 38% compared to last year. 59% of passengers are confirmed with automated solutions like Global Entry, APC and MPC, down from 85% last year.
- **Decreased booth staffing.** Booth hours decreased by 44% compared to last year, from 186 hours last year to 105 hours this year. This reduction hasn't led to increased waits.
- **Wait times decreased 8% year to date.** Wait times have decreased from 14.7 minutes last year to 13.5 minutes this year, a 8% decrease.
- **Cycle time is 4.5 seconds faster.** Global Entry, APC and MPC have combined to reduce average cycle time. Average cycle time (70.9 seconds) is down from 75.4 seconds a year ago. Maximum hourly throughput increased 3 passengers per hour, per booth.

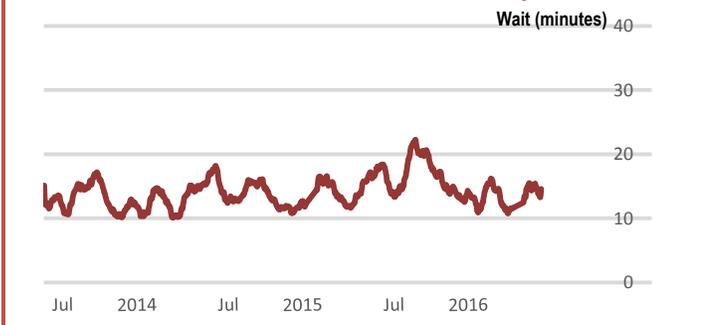

Traveler Volume ... downward trend

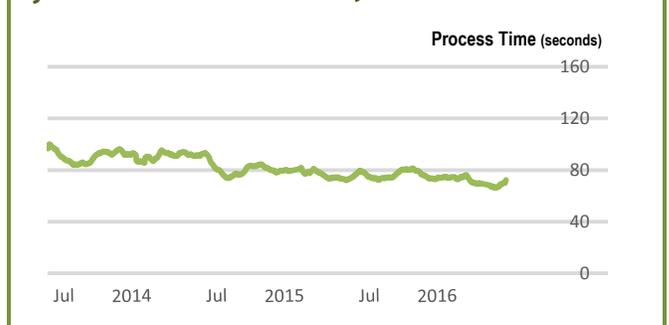

Booth Hours ... fewer booths over time

Wait Time ... downward trend since mid of 2015

Cycle Time ... much reduced cycle times

Best Practice Inventory

ATL Terminal F Best Practice Assessment: ATL Terminal F has implemented some of the available best practices like GE, APC and MPC. Most notably, 59% of passengers are now processed by Global Entry and APC. APC is available at ATL Terminal F not only to US Citizens, but also Canadians, Visa Waiver country travelers, and Lawful Permanent Residents.

Many innovative practices, technologies, and programs are available to make international air passenger processing more efficient and reduce congestion at airports. If all practices are implemented, an airport may reduce wait times as much as 50 percent compared to not implementing any best practices. A Green "assessment rectangle" indicates the practice is properly and fully implemented; Red means the practice is not in place; and Orange indicates implementation is limited and achieves less than intended results.

13% of passengers wait more than 30 minutes
 Year to date, approximately 3% of ATL Terminal F passengers wait more than 1 hour, approximately 13% of passengers wait more than 30 minutes. Between the hours of Noon to 4pm, 21% of passengers wait more than 30 minutes.

The highest waits are peak hours
 Over 270 passengers (on average) arrive every hour between Noon and 4pm. By opening 9 booths during this time period, wait times are 18 minutes which are much higher than the average. Opening more booths during 4am-8am may reduce overall average wait time.
