Compared to other major airports ...

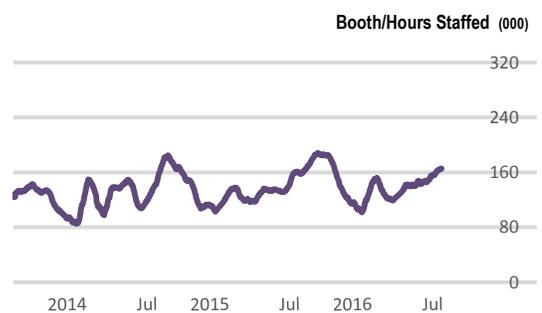

More booth hours maintain short waits despite more traffic

- Travel is up at Seattle Airport.** Traveler volume (year to date) has increased 4% compared to last year. Today, 52% of passengers are confirmed with Global Entry, APC, and MPC.
- Booth staffing increased.** Booth hours have increased by 6% compared to last year. The timing (throughout the day) of booth staffing has improved, but waits are still highest in off peak hours.
- Cycle time increased and throughput decreased.** Average cycle time has increased by 1.5 seconds, while max throughput has decreased by 1.1 traveler per booth, per hour since last year.
- Wait time up slightly.** Wait times increased to 14.7 minutes from 14.6 minutes, despite the 4% increase in traffic.

Traveler Volume ... continued healthy growth

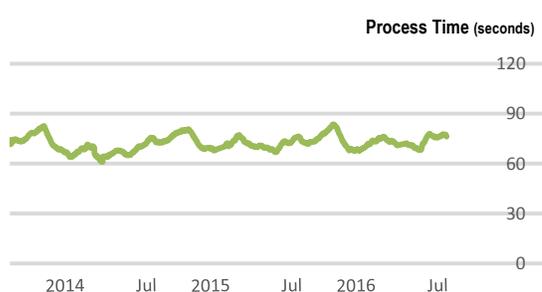

Booth Hours ... increasing since last year

Wait Time ... downward trend

Cycle Time ... slowly increasing since 2014

Best Practice Inventory

SEA Best Practice Assessment: SEA has implemented many of the available best practices like GE, APC and MPC. Most notably, 52% of SEA passengers are now processed by automated technologies like Global Entry and APC. MPC has been introduced recently. APC is available not only to US Citizens, but also Canadians, Visa Waiver country travelers, and Lawful Permanent Residents.

5%	GE Traveler %	The % of travelers pre-processed by each automated method is shown in the assessment rectangle. Rectangles are shaded green, yellow, or red based on the potential % for each method.
47%	APC Traveler %	
0%	MPC Traveler % (Actual 0.2811%)	

	APC for Canadians		Section 560/559 Initiative
	APC for Visa Waiver		Variable Message Signage
	APC for LPR / Nonimmigrants		One Stop
	Baseline Study Complete		Express Connect

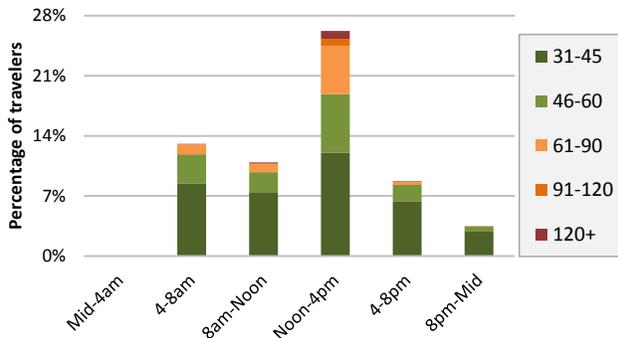

Many innovative practices, technologies, and programs are available to make international air passenger processing more efficient and reduce congestion at airports. If all practices are implemented, an airport may reduce wait times as much as 50 percent compared to not implementing any best practices. A Green "assessment rectangle" indicates the practice is properly and fully implemented; Red means the practice is not in place; and Orange indicates implementation is limited and achieves less than intended results.

15% of passengers wait more than 30 minutes

While very few SEA-TAC passengers wait more than 1 hour (about 3%), approximately 15% of passengers wait more than 30 minutes. Between the hours of Noon to 4pm, 26% of passengers wait more than 30 minutes.

% Passengers Waiting More than 30 Minutes

SEA staffs well to traffic

SEA is busiest between 8am to Noon, when over 390 passengers arrive per hour. An average of 10 booths per hour are staffed during this time and waits are slightly lower than the average. Waits are highest from Noon-4pm when 360 passengers arrive per hour.

Intraday Volume, Wait Times, and Booth Hours
