CBP Automated Manifest Interface Requirements

Importer Security Filing (ISF) Inputs to CBP

January 2015
Input to Customs and Border Protection

This transaction set is final and conforms to the published Importer Security Filing and Additional Carrier Requirements interim final rule. It will continue to be posted on this page for the ease of the Trade but will be incorporated in the ACE M1 CAMIR in the coming months.

Provides descriptions and format requirements for each data element contained within a transaction record input by a carrier, NVOCC, port authority, or service bureau to transmit data to the U.S. Customs and Border Protection (CBP) Data Center.

TRANSACTION PROCESSING

INPUT RECORD USAGE MAPS

OUTPUT RECORD USAGE MAP

RECORD DESCRIPTIONS

Record Identifier M01 .. The Manifest Record provides data element descriptions and format requirements for transmitting manifest data.

Record Identifier M02.. The Manifest Continuation Record provides data element descriptions and format requirements for transmitting the carrier-assigned batch number.

Record Identifier B04.. The Manifest Reference Identifier record is used to provide the unique voyage identifier for a particular voyage.

Record Identifier P01.. The Port Record provides data element descriptions and format requirements for transmitting port data.

Record Identifier J01.. The Issuer Code Record provides data element descriptions and format requirements for transmitting issuer data.
Record Identifier A01 ................................................................. INP-26
The Amendment Record provides data element descriptions and format requirements for transmitting manifest amendments.

Record Identifier B01................................................................. INP-28
The Bill of Lading Transaction Record provides data element descriptions and format requirements for transmitting manifest and bill of lading data.

Record Identifier B02................................................................. INP-30
The Bill of Lading Transaction Record provides data element descriptions and format requirements for transmitting additional manifest and bill of lading data.

Record Identifier B04................................................................. INP-34
The Bill of Lading Reference Identifier record is used to provide auxiliary identifier information for an ocean bill of lading.

Record Identifier S01 ................................................................. INP-37
The Shipper Name/Address Record provides data element descriptions and format requirements for transmitting the foreign shipper's name and first line of the address.

Record Identifier S02 ................................................................. INP-38
The Shipper Address Record provides data element descriptions and format requirements for transmitting lines two and three of the foreign shipper's address.

Record Identifier S03 ................................................................. INP-39
The Shipper Telephone/Telex Record provides data element descriptions and format requirements for transmitting the shipper's telephone/telex number.

Record Identifier U01 ................................................................. INP-40
The Consignee Name/Address Record provides data element descriptions and format requirements for transmitting the consignee's name and first line of the address.

Record Identifier U02 ................................................................. INP-41
The Consignee Address Record provides data element descriptions and format requirements for transmitting lines two and three of the consignee's address.

Record Identifier U03 ................................................................. INP-42
The Consignee Telephone/Telex Record provides data element descriptions and format requirements for transmitting the consignee's telephone/telex number.

Record Identifier N00 ................................................................. INP-43
The Entity Name Record provides data element descriptions and format requirements for transmitting a party by type of organization, name, and code.

Record Identifier N01 ................................................................. INP-47
The Notify Party Name/Address Record provides data element descriptions and format requirements for transmitting the notify party's name and first line of the address.

Record Identifier N02 ................................................................. INP-48
The Entity Address Record provides data element descriptions and format requirements for transmitting lines of the entity’s address.

Record Identifier N03 ................................................................. INP-49
The Notify Party Telephone/Telex Record provides data element descriptions and format requirements for transmitting the Notify Party's telephone/telex number.
**Record Identifier N03** .................................................. INP-50
The Entity Geographic Area Record provides data element descriptions and format requirements for transmitting the entity’s address.

**Record Identifier N04** .................................................. INP-51
The Administrative Communications Contact Record provides the name and communications number of a contact.

**Record Identifier I01** .................................................. INP-52
The In-bond Record provides data element descriptions and format requirements for transmitting in-bond data.

**Record Identifier I02** .................................................. INP-54
The In-bond Record provides data element descriptions and format requirements for transmitting optional waterborne export data for the U.S. Bureau of Census.

**Record Identifier C01** .................................................. INP-55
The Bill Container Record provides data element descriptions and format requirements for transmitting container numbers and seal numbers associated with bills of lading.

**Record Identifier C02** .................................................. INP-58
The Bill of Lading Container Record provides data element descriptions and format requirements for transmitting Vehicle Identification Numbers (VIN) associated with a specific container.

**Record Identifier D00** .................................................. INP-59
The Additional Cargo Description Record provides data element descriptions and format requirements used to characterize a commodity and compliments the verbal description in the D01 record.

**Record Identifier D01** .................................................. INP-61
The Bill Cargo Description Record provides data element descriptions and format requirements for transmitting descriptions of the cargo.

**Record Identifier D02** .................................................. INP-62
The Marks and Numbers Record provides data element descriptions and format requirements used to specify information regarding marks and numbers.

**Record Identifier V01** .................................................. INP-63
The Hazardous Material Record provides data element descriptions used to specify information relating to hazardous materials.

**Record Identifier V02** .................................................. INP-64
The Hazardous Material Record provides data element descriptions used to specify additional information relating to hazardous materials.

**Record Identifier V03** .................................................. INP-65
The Hazardous Material Record provides data element descriptions used to specify additional data relating to V01 and V02 records.

**Record Identifier W01 (Output Only)** .................................. INP-66
The Error Record provides data element descriptions and format requirements for transmitting error conditions for each data element in error.

**Record Identifier W02 (Output Only)** .................................. INP-67
The Message Acceptance Record provides data element descriptions and format requirements for transmitting the cumulative result of an original Manifest or amendment transaction.
TRANSACTION PROCESSING

Manifest input records provide a carrier, NVOCC, port authority, or service bureau with the format for transmitting manifest data to the CBP Data Center. The input records provide all identifying information for the manifest, bill of lading, reference information, shipper and consignee, notify parties, in-bond information, containers, cargo descriptions, marks and numbers, and hazardous materials.

Included in the data is information on hazardous material or substances. CBP needs to retain data on substances and materials determined by the Secretary of Transportation to be capable of posing unreasonable risk to health, safety and property when transported in commerce. The information is also for the use of other interested parties such as the Coast Guard, Port Authorities and the Department of Transportation.

Information on Harmonized Tariff Schedule codes and on values and weight for shipments traveling under Transportation and Exportation (T&E) and Immediate Exportation (IE) bonds may be downloaded to the Bureau of Census in export shipments records. Currently the information is extracted from CBP Form-7512. With the advent of Paperless T&E processing, this form is no longer collected at border points by CBP and distributed to Census. In the future, the obligation of the carrier to provide this information to Census separately may be hindered by the downloading.

Original manifest submissions are reported using an Application Identifier (on ACR record) of “MI”. The corresponding outbound response Application Identifier (on ACR record) is “MR”. When multiple loading ports exist for the same vessel, the original Manifest ‘MI’ will be submitted for each load port per 24 hour reporting requirements.

The carrier, NVOCC, service bureau, or port authority can amend bill of lading data that was previously entered into the system. Present regulations require that amendments be made to a manifest within 60 days after vessel arrival. The carrier, NVOCC, service bureau, or port authority will be allowed to electronically change the manifest as long as the manifest remains on line with no hard copy Manifest Discrepancy Report (MDR) required. The carrier, service bureau, or port authority may add an additional bill of lading, delete a bill of lading, or replace manifest data on an existing bill of lading. Manifest amendments are reported using an Application Identifier (on ACR record) of “AI”. The corresponding outbound response Application Identifier is “AR” (on ACR record). The Manifest Amendment Application Identifier “AI” and Record Identifier “A01” must be used to add a bill of lading after vessel arrival.

This chapter provides descriptions and format requirements for each data element contained within each AMS input or output response record. Format the accumulated data into the prescribed record formats as outlined in this chapter. Refer to the sections on Input Record Usage Map and Output Record Usage Map for a layout of mandatory, conditional, and optional records and looping structures.
General Rules for Input Transmissions and Responses from CBP:

- Spaces are transmitted in all data elements marked ‘filler’.
- Transmit ONLY uppercase ENGLISH alphabetic data.
- Transmit ONLY displayable characters found on a standard keyboard. Low-values, carriage return characters, or other non-standard characters must NOT be transmitted.
INPUT RECORD USAGE MAPS

The following tables illustrate how the automated interface expects repeating groups to be structured within an original manifest submission or manifest amendment. Additional notes are provided for clarification on looping structures. When provided, all Records must be in the order described below.

</table>

Designation: M = Reporting Mandatory; C = Reporting Conditional; O = Reporting Optional

**Note 1:**

When multiple Manifest Groupings are received within the same ACR, all Manifest Groupings will be processed with the same ACR application ID.

**Note 2:**

The total number of bill(s) of lading within a single manifest should not exceed a practical limit of 9999. All Bill of Lading transactions (records B01 through V03) may follow a single Issuer record (J01), or multiple Issuer records (J01) may be included, each followed by one or more associated Bill of Lading transaction groups.
Note 3:

Bill of Lading Transaction – SNP (B02) and Reference Identifier (B04) records are mandatory for NVOCC’s.

Note 4:

All manifest submissions must include the shipper name and address information; additionally, the name and address must be provided for either the consignee or at least one notify party. When reporting shipper name and address information, consignee name and address and notify party name and address information, one of the following reporting practices must be used throughout a given AMS submission:

- S01/S02/S03 record loop is used for shipper information, U01/U02/U03 record loop is used for consignee information, and N01/N02/N03 record loop is used for notify party information. The Shipper Name/Address (S01) record is mandatory in this case. In addition, the N00/N02/N03/N04 record loop is used to report information for secondary notify parties (SNP), Customs Brokers (CB), “Booking” (BKP) and “Ship To” (ST) parties. Any other party in the N00 record would be rejected. The Entity Name (N00) record is mandatory in this case, and specifically when reporting the “Booking” and “Ship To” parties, the Entity Geographic Area (N03) record is optional, in this case, the maximum usage of the Entity Name record (N00) is 20.

or

- N00/N02/N03/N04 record loop is used to report name and address information for the shipper (SH), consignee (CN), notify parties (N1, N2), secondary notify parties (SNP) and/or Customs Broker (CB). The Entity Name (N00) record is mandatory in this case, and specifically when reporting the “Booking” (BKP) and “Ship To” (ST) parties, the Entity Geographic Area (N03) record is optional, in this case, the maximum usage of the Entity Name record (N00) is 25. Implemented with M1.

When used to report a Secondary Notify Party (SNP) or Customs Broker (CB), only the N00 record is provided. When used to report all other parties, the N00 record is followed by the N02 Entity Address, optional N03 Entity Geographic Area and optional N04 Administrative Communications Contact records.
Note 4 – Continued:

The following examples illustrate use of the various possibilities for party reporting:

Example 1 – Use of S01/S02/S03, U01/U02/U03, and N01/N02/N03:
S01 (Shipper)
S02
S03
U01 (Consignee)
U02
U03
N01 (Notify Party 1)
N02
N03
N01 (Notify Party 2)
N02
N03

Example 2 – Shipper, Consignee, and Security Filing parties:
S01 (Shipper)
S02
S03
U01 (Consignee)
U02
U03
N01 (Notify Party 1)
N02
N03
N00 (Customs Broker)
N00 (Booking Party)
N02
N03
N04
N00 (Ship To Party)
N02
N03
Note 4 – Continued:

Example 3 – Use of N00/N02/N03/N04 for all parties (Implemented with M1):
N00 (Customs Broker)
N00 (Shipper)
N02
N03
N00 (Ship To party)
N02
N02
N03
N04
N00 (Secondary Notify Party)
N00 (Consignee [or Notify Party])
N02
N02
N03
N04

Note 5:

A maximum of 999 Harmonized Nomenclature (D00) records may be submitted for each container record.

A maximum of 999 Cargo Description (D01) records may be submitted for each container record. One or more D01 records may be grouped together and preceded by one or more Harmonized Nomenclature (D00) records, in which case the D00 records are applicable to the entire group of D01 records which follows (up to the next D00 record).

A maximum of 999 Marks and Numbers (D02) records may be submitted for each container record. The D02 records typically follow associated D01 record(s).

The Cargo Description Grouping structure allows for the following as illustrated in the example below:

Example 1:
C01
C02
C02

Note 6:
Hazardous Material information (V01-V03) is mandatory if hazardous materials are being shipped. The hazardous material records V01, V02, and V03 will follow the Description (D00 and D01) records and the Marks and Numbers (D02) record. One V01, V02, V03 group is allowed for each hazardous commodity. A maximum number of 99 groups per container are permitted. The HAZMAT Grouping must be reported after all Cargo Description Groupings are complete for a Bill Of Lading Container Grouping.
Note 6 – Continued:

The HAZMAT Grouping structure allows for the following as illustrated in the examples below:

**Example 1:**

V02  
V01  
V03

Note 7:

For amendments to add a bill of lading, the Amendment record (A01) is followed by the associated bill of lading transaction records (B01 through V03). For amendment to delete or replace a bill of lading quantity, the A01 alone is included, and B01 through V03 are not required in this case.

Note 8:

In-bond information (I01) is mandatory when the Master In-bond Indicator data element set to ‘1’ in the B01 Record. Only one occurrence is allowed per In-bond Grouping.
OUTPUT RECORD USAGE MAP

The M01, M02, and P01 are always returned in the response from CBP, and additionally the following “group header” records will conditionally be returned in the response message when one or more errors is determined for any record within that group: J01, B01, N00, C01, I01, and V01. When one or more error(s) are determined as a result of processing a given transaction, each record in-error is returned in the response message and is immediately followed by one or more Error records (W01) describing the nature of the error. The Message Acceptance/Rejection record (W02) provides summary information on number of Bills of lading accepted/rejected, and is included at the end of a response transaction prior to the ZCR record.

Conditional output records and fields will be populated only if the corresponding records and fields were included in the original or amended manifest submission.

The following table illustrates how the automated interface expects repeating groups to be structured within an original manifest submission response (MR) or manifest amendment response (AR). Additional notes are provided for clarification on looping structures.

Outbound Response for Original Manifest or Amendment (MR/AR) Record Usage Map:

**Note 1:**

When Original Manifest Submission (MI) or Manifest Amendment (AI) transactions are received with multiple Manifest groupings in a single input message, a separate outbound response is generated for each separate Manifest (M01 through V03 records), each with its own Transaction Control Header and Trailer records.

**Note 2:**

The Manifest records (M01) and Port record (P01) are always returned in the response. If the M02 and B04 are provided on the inbound message, they will be returned in the response.

Designation:  M = Reporting Mandatory;  C = Reporting Conditional
**Note 3:**

For an error at the Manifest level (M01, M02, or B04), all Bills of Lading will be rejected, and each Port record (P01) is returned in the response message immediately followed by an Error record (W01) with error code 102, indicating that “NO BILLS PROCESSED FOR PORT”.

For an error at the Port level (P01), all Bills of Lading for the given Port will be rejected, and the specific Port record (P01) is returned in the response message immediately followed by one or more Error record(s) (W01) describing the error conditions, followed by an additional Error record (W01) with error code 102, indicating that “NO BILLS PROCESSED FOR PORT”.

**Note 4:**

For an error at the Issuer record (J01) level, all Bills of Lading for the given Issuer will be rejected. The J01 will be returned in the response message immediately followed by each Bill of Lading records (B01) for the Issuer, a W01 record indicating the J01 error, and a W01 record with error code 060, indicating “BILL REJECTED”.

For an error on any record within a Bill of Lading grouping for a given Issuer, the J01 record is returned in the response prior to the record(s) in error.

**Note 5:**

For manifest amendments, the Amendment record (A01) is returned in the response immediately followed by 1 or more W01 records describing the specific error condition(s).

For responses to original manifest submissions, the Amendment record (A01) is not applicable.

**Note 6:**

For an error on a specific Bill of Lading Grouping (records B01 through V03), only the affected bill is rejected, and processing continues to the next Bill of Lading within the same Issuer group.

**Note 7:**

For error(s) on any record (B01 through V03) for a given Bill of Lading grouping, the B01 record for that Bill of Lading will be returned in the response message prior to the record(s) in error.

For error(s) on any record (N00 through N04) for a given Entity grouping, the N00 record for that Entity will be returned in the response message prior to the record(s) in error.

For error(s) on the I02 record for a given in-bond grouping, the I01 record for that In-bond will be returned in the response message prior to the I02 record.
Note 7 - Continued:

For error(s) on the any record (C02 through V03) for a given Bill of Lading Container grouping, the C01 record for that Container will be returned in the response message prior to the record(s) in error.

For error(s) on the V02 or V03 records for a given HAZMAT grouping, the V01 record for that HAZMAT grouping will be returned in the response message prior to the record(s) in error.

For error(s) on the header record for a group (B01, N00, I01, C01, or V01), the record in error will be returned in the response message, immediately followed by 1 or more W01 records describing the specific error condition(s); the remaining record(s) within that group will still be validated, and additional record(s) in error returned in the response, immediately followed by 1 or more W01 records as appropriate.

Immediately following the last Error record (W01) for a given Bill of Lading grouping (B01 through V03), an additional W01 record is included in the response with error code 060, indicating “BILL REJECTED”.

Note 8:

The Message Acceptance/Rejection record (W02) is always included immediately prior to the Transaction Control Trailer record (ZCR) and provides summary information including number of Bills of Lading accepted and rejected.

A successful (error-free) input transaction will result in a response consisting only of the records: ACR, M01, M02 (optional), B04 (optional), P01, W02, and ZCR.

Note 9:

This occurrence of the W01 Record is used to report errors at the ACR or ZCR level.
Record Identifier M01

Manifest Record

This is a mandatory record used to transmit vessel information and specific manifest data. Once the original manifest (ACR record positions 14-15 code MI) has been transmitted and accepted, the M01 record becomes ‘frozen’. In any subsequent amendments and actions (ACR record positions 14-15 code ‘AI’, ‘HI’, ‘II’, ‘TI’) the mandatory and required elements in the M01 record in the original manifest must be submitted. This means if the vessel name (positions 12-34) were submitted in the original manifest, it is required in any subsequent amendments or actions. If the IMO Lloyds vessel code (positions 52-58) were submitted in the original manifest, it is required in any subsequent amendments or actions. If both the vessel code (positions 12-34) and the IMO Lloyds vessel code positions 52-58) were submitted in the original manifest they are required in any subsequent amendments or actions.

**Note 1:**

The Standard Carrier Alpha Code (SCAC) is issued by the National Motor Freight Traffic Association, Inc. located at 1001 North Fairfax Street, Suite 600, Alexandria, VA 22314. The Internet URL is: [www.NMFTA.org](http://www.NMFTA.org). In the case of water carriers who own their containers, the SCAC is issued by the Intermodal Association of North America located at 6410 Kenilworth Ave., Suite 108, Riverdale, MD 20737.
Record Identifier M02

Manifest Continuation Record

This is a conditional record used to transmit the carrier-assigned batch number.

</tbody>
</table>
Record Identifier B04
Manifest Reference Identifier

This is a conditional record used to report a Unique Voyage Identifier (UVI) associated with the Manifest record (M01). The UVI is submitted from MVOCC’s only. The number used must be unique for 5 years. This record can be included with original manifest submissions but should NOT be submitted with manifest amendments. Inclusion of the B04 record in any amendments will result in a ‘096’ error code ‘Run has been terminated’

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>
Record Identifier A01
Amendment Record

This is a conditional record used to identify the type of manifest amendment being transmitted. This record is required when an AMS participant amends the manifest quantity, or adds or deletes a bill of lading. The A01 record is not included for original manifest submissions. When a manifest is arrived the A01 record is required to add a new Bill of Lading or amend an existing Bill of Lading. This record is required when the ACR Application Identifier is AI.

<table>
<thead>
<tr>

</tbody>
</table>

Note 1:
The following conditions apply to the action codes:

- If the action code is A, the new bill of lading is added to the database files of the associated manifest.
Note 1 – Continued:

- If the action code is A, all the appropriate data elements required for the following records must be transmitted:

  Bill of Lading Transaction (B01)
  Bill of Lading Transaction (B02)
  Bill of Lading Reference Identifier (B04)
  Shipper Name/Address (S01)
  Shipper Address (S02)
  Shipper Telephone/Telex (S03)
  Consignee Name/Address (U01)
  Consignee Address (U02)

  Additional Cargo Description (D00)
  Bill Cargo Description (D01)
  Marks and Numbers (D02)
  Hazardous Material (V01)
  Hazardous Material (V02)
  Hazardous Material (V03)

- If the action code is D or R, do not transmit the B01 through V03 records for the bill being deleted.

- If the action code is D, the bill of lading status is changed to deleted in the database files of the associated manifest.

- If the action code is R, the quantity at the bill level is replaced with a specified quantity.

- If Bill of Lading number different than Bill of Lading Number in B01.Bill of Lading Sequence Number, then Bill of Lading number in A01.Bill of Lading Sequence Number used."
Record Identifier B01
Bill of Lading Transaction Record

This record is mandatory when an AMS participant adds a bill of lading as part of an original manifest submission or manifest amendment. The B01 record is not included in manifest amendments to delete a bill of lading or amend the manifest quantity.

**Note 1:**

Foreign retained on board (FROB) Cargo Laden in foreign, touching one or many U.S. ports, proceeding foreign on the same vessel/voyage. The vessel name/voyage numbers do not change during the entire trip, and the vessel does not touch foreign and return to the U.S. during the itinerary. The bill becomes "fully closed" at transmission.

If Bill of Lading number different than Bill of Lading Number in B01.Bill of Lading Sequence Number, then Bill of Lading number in A01.Bill of Lading Sequence Number used."

**Note 2:**

The empty container bill type can only be used for carrier-owned/leased instruments of international traffic.
In accordance with the CBP regulations at 19 CFR 10.41a and 19 CFR 113.66, entities requesting release (without entry) for instruments of international traffic must have a Type 3a Instruments of International Traffic bond and must have an application approved by the CBP Port Director. In order to transmit the empty container bill type and request release without entry for IIT, the IMPORTER must comply with the CBP regulations at 19 CFR 10.41a and 19 CFR 113.66. Where the IIT is completely empty and the carrier is requesting release under the CBP regulations at 19 CFR 10.41a, the principal on the type 3A CBP bond must be the applicant for release of the holder or container designated as IIT. In cases where the empty container bill type is used, the carrier transmitting the information is the importer.

Advance electronic cargo information for carrier-owned/leased IIT must be received by CBP via Vessel AMS no later than 24 hours prior to vessel arrival at the first U.S. port. Advance electronic cargo information for shipper/consignee-owned or shipper/consignee-leased IIT must be transmitted in the same manner as information for any other revenue shipment and the transmission time frames (no later than 24 hours prior to loading in the foreign port) for revenue shipments apply.

For bill types “Q”, “R”, “S”, “T” (FROB type bills of lading with security filing) the Harmonized Number (Record D00, positions 3-13) is required.
Record Identifier B02
Bill of Lading Transaction Record

This record is a conditional record that is required when an AMS participant adds a bill of lading as part of an original manifest submission or manifest amendment. Use this record to nominate up to two secondary notify parties to receive an electronic duplicate of the bill status sent to the primary AMS participant. Additional SNP’s may be shown in the N00 record. The secondary notify parties must have established communications links with AMS.

The B02 record is not included in manifest amendments to delete a bill of lading or amend the manifest quantity.

**Note 1:**

Secondary notify party allows AMS participants to nominate up to eight other entities to receive a copy of the status notification for an individual bill of lading. The information transmitted to the second party is a duplicate of the data received by the primary AMS participant. The secondary notify parties are designated via the B02 or N00 Records.

### Note 2:

For the BOL Status Indicator in the B01 of Q, R, or S, the B04 record is used to provide both the Foreign Port of Unlading (“CSK”, Census Schedule K Code) and Place of Delivery (“ULC”,
UNLOCode). The Foreign Port of Unloading is a 5 character numeric code, left justified in the B04 record positions 7 to 11. The UNLOCode is 5 alpha/numeric characters, left justified in the B04 record positions 7 to 11.

**Note 2 – Continued:**

For the BOL Status Indicator in the B01 of T (T&E and IE), use the B04 record to provide the Place of Delivery ("ULC", UNLOCode) beyond the Foreign Destination, i.e., Foreign Port of Unloading that is reported in the Record Identifier I01, data element Foreign Destination. The Place of Delivery is 5 alpha/numeric characters, left justified in the B04 record positions 7 to 11.

The B04 record is used by carriers filing House Bills of Lading to report the associated Master Bill of Lading Number ("OB", Ocean Bill of Lading). The Master Bill of Lading is 5 to 16 characters in length, left justified in the B04 record positions 7 to 22. For Rail: The 'OB' qualifier in the N901 is used to report the Bill of Lading number of the original ACE M1 waterborne carrier (OB) who initially imported the cargo into Canada or Mexico.

The B04 record is used by carriers to report the original bill of lading number ("OL") in cases where the original shipment is modified. The new bill of lading must be related to the original bill of lading. The original bill of lading number is 5 to 16 characters in length in the B04 record positions 7 to 22.

The B04 record is also used by carriers to report the Mexican Pedimento Number ("FEN", Foreign Entry Number). The Mexican Pedimento Number is 15 numeric characters, left justified in the B04 record positions 7 to 21. There should be no embedded hyphens, dashes or other special characters. The required format for a Mexican Pedimento Number is as follows:

\[yyppbbbbddddddd\]

where:  
- **yy** - the last two digits of a year  
- **pp** - the Mexican customs port code  
- **bbbb** - the Mexican broker code  
- **ddddddd** - the document number
Record Identifier S01
*Shipper Name/Address Record*

This is a record used to transmit the shipper's name and the first line of the address. This data must be transmitted exactly as it appears on the ocean bill of lading. AMS participants must provide shipper name and address information that is as full and complete as possible.

Shipper information is mandatory for a bill of lading and must be provided using either the S01/S02/S03 or the N00/N02/N03/N04 record loop.

Record Identifier N00

Entity Name Record

This conditional record is required when the Entity Grouping is used to transmit a party by type of organization, name, and code. The data must be transmitted exactly as it appears on the bill of lading. AMS participants must provide complete information. This record may be repeated to identify other parties associated to a bill (such as Secondary Notify Party and Customs Broker). For Importer Security Filing, the N00/N02/N03/N04 loop must be used to report Ship To (Ship to Name and Address) and Booking Party.

When used to report a Secondary Notify Party or Customs Broker, only the N00 record is provided. When used to report all other parties, the N00 record is followed by the N02 Entity Address, N03 Entity Geographic Area and optional N04 Administrative Communications Contact-Notify Party records. The maximum number of times the record loop may be repeated is twenty-five (25) times.

The N00/N02/N03/N04 record loop can be used for reporting shipper name and address information (Entity Code=SH), consignee name and address information (Entity Code=CN, and notify party name and address information (Entity Code=N1 or N2), in lieu of the S01/S02/S03, U01/U02/U03, and N01/N02/N03 record loops. Implemented with M1.

**Note 1:**

Secondary notify party allows AMS participants to nominate up to eight other entities to receive a copy of the status notification for an individual bill of lading. With the implementation of M1, this number expands to 25 entities. The information transmitted to the second party is a duplicate of the data received by the primary AMS participant. The secondary notify parties are designated via the B02 or N00 Records.

Record Identifier N01
Notify Party Name/Address Record

This is a conditional record used to transmit the notify party's name and the first line of the address data. This data must be transmitted exactly as it appears on the ocean bill of lading. AMS participants must provide notify party name and address information that is as full and complete as possible.

The N01 record is immediately followed by the N02 Entity Address and optional N03 Notify Party Telephone/Telex records. The maximum number of times the record may be repeated is three (3) times.

Either the Consignee information or Notify Party information is mandatory for a bill of lading. Consignee information may be provided using either the U01/U02/U03 or N00/N02/N03/N04 record loop.

Note: The N01 record is immediately followed by the N02 Entity Address and optional N03 Notify Party Telephone/Telex records. The maximum number of times the record may be repeated is three (3) times.

Either the Consignee information or Notify Party information is mandatory for a bill of lading. Consignee information may be provided using either the U01/U02/U03 or N00/N02/N03/N04 record loop.
Record Identifier N02
*Entity Address Record*

This is a conditional record used to transmit lines of the entity’s address data. This data must be transmitted exactly as it appears on the ocean bill of lading. Up to two (2) occurrences of the N02 are allowed to report the entity’s address data when used with the N00 Record as the loop header. Only one occurrence is valid when used with the N01 Record as the loop header.

**Note 1:**

In-bond type 63 (IE) cargo is not subject to BTA/FDA reporting and the indicator should always be “N”.

---
Record Identifier I02
In-bond Record

This is an optional record used to transmit waterborne export data for the U.S. Bureau of the Census (in lieu of CR7513) if available at the time of Manifest reporting and the I01 In-bond Entry Type is ‘62' or ‘63’. This record must be paired with the I01 record. If not reported here, it can be reported in the H02 record in the HI message.

DRAFT
Record Identifier C01
Bill Container Record

This record is mandatory when an AMS participant adds a bill of lading as part of an original manifest submission or manifest amendment. This record is used to transmit the container/equipment number and seal numbers associated with a bill of lading. Transmit as many C01 records as necessary to record container/equipment and seal numbers that exist per bill of lading. Cannot exceed 999 containers (C01’s) per bill of lading. There can only be one container/equipment number per C01 record, but up to two seal numbers. Quantities for each container/equipment are the sum of the Piece Count field in the Bill Cargo Description (D01) record(s). The C01 record must precede the D00, D01, and D02 cargo description records for commodities associated with container/equipment. If using ISO codes for container type from Appendix M, participant does not have to send length, height and width.

The C01 record is not included in manifest amendments to delete a bill of lading or amend the manifest quantity.

**Customs Automated Manifest Interface Requirements – Ocean ACE M1**
**Record Identifier D00**

*Additional Cargo Description Record*

This is a conditional record used to report Harmonized Tariff information for a commodity. The universally recognized reference number, the Harmonized Tariff Schedule Code, characterizes a commodity and complements the written description in the D01 record. It is not used for classification purposes. At least the Harmonized Tariff Schedule Code number must appear in this record to make it valid. A commodity value and/or net weight without the code number will not be accepted. AMS will accept all 10 positions of the code number, but fewer positions of the code are acceptable. AMS participants are requested to submit a commodity value and net weight for each type of commodity referenced in the D01 record. It is mandatory for participants in the paperless T&E and IE programs to submit a D00 record as part of their bill data.

If the descriptions in the D01 record correspond to the information in the D00 record, and the commodity remains unchanged, it is not necessary to repeat the D00 record. If the commodity is different in the second or subsequent D01 records, a new D00 record with that new commodity's Harmonized Tariff Schedule Code number, commodity value and net weight information should be submitted. If different harmonized numbers describe a single commodity, multiple D00 records, each with a different Harmonized number may be grouped before a D01 record.

Bill Cargo Description Record

This record is mandatory when an AMS participant adds a bill of lading as part of an original manifest submission or manifest amendment. This record is used to transmit the description of the cargo. Up to 999 D01 records may exist per Bill Container (C01) record. AMS participants must provide complete and accurate commodity descriptions in this record.

The D01 record is not included in manifest amendments to delete a bill of lading or amend the manifest quantity.

<td>Space fill.</td>
<td></td>
</tr>
</tbody>
</table>

**Note 1:**

If there is more than one line of description for a container, each D01 record may contain an entry in the piece count giving the quantity for that record only. CBP computes the container quantity by totaling the D01 records.

Alternately, the first D01 record's piece count may contain the total piece count for the entire container with subsequent description piece counts embedded in the description. For example, 9 cartons plastic toys, 5 bales textile pieces, and 7 coils steel wire. The quantity for this container is 21 pieces.

The total amount in all piece count fields in all D01 records must equal the amount in the manifest quantity field on the associated B01 record.
**Record Identifier D02**

*Marks and Numbers Record*

This record is mandatory when an AMS participant adds a bill of lading as part of an original manifest submission or manifest amendment. This record is used to specify information regarding marks and numbers. Diagrams, drawings, figures and other representations appearing on packaging may be described in writing. By capturing marks and numbers data in AMS, CBP seeks to incorporate in an automated environment information that is already made mandatory in the CBP manifest by Part 4 of the CBP Regulations. AMS users must provide full and complete manifest marks and numbers information, as in the paper manifest. There may be 999 D02 records per container per bill of lading.

The D02 record is not included in manifest amendments to delete a bill of lading or amend the manifest quantity.

Record Identifier V01

Hazardous Material Record

This is a conditional record required when an AMS participant adds a bill of lading for a shipment that contains hazardous materials. This record is used to specify information relative to hazardous materials, as defined in the 49th Code of Federal Regulations, for Ocean and Intermodal manifests. There may be 99 V01 records per container.

The V01 record is not included in manifest amendments to delete a bill of lading or amend the manifest quantity.
