Status Notification for PE Data Submission

(Stand-alone Partner Government Agency Data)

This transaction is currently only used for filing FDA Prior Notice. In the future, it may be used by other agencies.

The PE record is used for the input. The PX record is used for the output. The PO is used for providing status notifications for accepted PE submissions.

Processing Results

The processing results notify the submitter of the Prior Notice Confirmation number, or when submitting Prior Notice data via the PE, a PO will be used to return status related to the submitted information.

FDA Prior Notice Status Notifications

When submitting Prior Notice data via the PE, a PO will be used to return status related to the submitted information.

General Data Submission Rules

Unused fields, which are defined as numeric, should not be zero-filled. These fields should be space filled or data errors may result.

Data should not be placed in fields defined as filler. If data is present in filler fields, an error message may be system generated.

When transmitting data, all letters must be upper case. While some applications may not return specific error messages when detecting lower-case letters, CBP cannot guarantee the consistency of processing results for data transmitted in lower case.

Data Elements

The data element descriptors are defined as:

Code	Description
------	-------------

A	The data element is alphabetic only.
AN	The data element is alphanumeric only.
C	The data element is special characters.
N	The data element is numeric only.
X	The data element is alphanumeric or special characters.

All data elements are in fixed-length format. If all positions are not filled, the formatting rules are:

Code	Description
------	-------------

A	Left justify and Space fill.
AN	Left justify and Space fill.
C	Left justify and Space fill.
N	Right justify and zero-fill.
X	Left justify and Space fill.

Note: If there is no data to insert in a field, Space fill.
