309 U.S. Customs Manifest with Importer Security Filing

Functional Group ID=SO

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the U.S. Customs and Border Protection (CBP) Manifest Transaction Set (309) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used by carriers, [Master Vessel Operating Common Carriers \(MVOCC's\)](#), [Non-Vessel Operating Common Carriers \(NVOCC's\)](#), terminal operators, port authorities, or service centers to provide CBP with manifest data on cargo arriving in or departing from the U.S. on oceangoing vessels, railroad trains, or other types of conveyances. The transaction set can be also used by carriers or NVOCC's to provide terminal operators, port authorities, or service centers with manifest data on cargo arriving at their facilities via the conveyances mentioned above.

This Implementation Guideline uses the ASC X12 4010 Standards Version/Release as its base. The transaction structure has been altered to accommodate U.S. Customs and Border Protection implementation requirements.

Notes:

ABI ENTRY FILERS-U.S. Customs and Border Protection will send a copy of the TS309 to the Filer identified in the N1 if requested via the Automated Manifest System Broker Download functionality. The Filers will transmit individual releases for each TS309. Releases will be consolidated at the time of summary filing. Status notifications (TS350) will go to either the carrier or NVOCC and to the Filer via ABI as entries are filed and releases obtained.

IMPORTER SECURITY FILING-This transaction set is final and conforms to the published Importer Security Filing (ISF) Requirements interim final rule.

Importer Security Filing Information (ISF-5) for FROB, T&E, and IE Bills of Lading (M1109=35, 36, 37, [46](#) or 38):

1. Booking Party Name and Address - N1 (Required), N3 (Required), N4 (Optional) segments
 2. Foreign Port of Unlading - M1204 with in-bond
 3. Place of Delivery - N9 for FROB (non-in-bond)
 4. Ship to Name and Address - N1 (Required), N3 (Required), N4 (Optional) segments
 5. Harmonized Tariff Schedule at minimum 6-digit level - N10 segment
- The five data elements above can be consolidated with the standard TS309 Bill of Lading transaction set at the locations identified in this implementation guide.

SPECIAL MESSAGING CONSTRAINTS:

- Limit one Interchange (ISA-IEA) per message transmission.
- Limit one message Group (GS-GE) per message transmission.
- Multiple transaction sets (ST-SE) of the same Transaction Set Identifier Code (i.e., 309) are allowed per message transmission.
- Element delimiters used in this transaction must be ' * ' (asterisk). No blanks between delimiters if element is null.
- Segment delimiters used in this transaction should be one byte with a value of hex '15'. A segment delimiter should be the last byte of data in the message transmission data stream.
- Only transmit uppercase AMERICAN ENGLISH alphabetic data.
- Transmit ONLY displayable characters found on a standard American English keyboard.
- Low-values, carriage return characters, or other non-standard characters will NOT be accepted.
- 'Not Used' in the left column indicates that a composite or data element will not be used by CBP.
- 'Dep' in the left column indicates that CBP usage of a particular segment or element is Dependent (Conditional) within the CBP application.
- Per the ASC X12 Standard, an 'M' indicates a Mandatory use, 'O' indicates Optional use, and an 'X' indicates a Conditional use. CBP requirements may override ASC X12 Standard Mandatory or Conditional usages.
- Maximum allowable message transmission size is [12.8](#) megabytes ([12,582,9128,388,608](#) bytes) of data.

Purpose: To transmit manifest identifying information
Syntax Notes:

- 1 If either M1004 or M1010 is present, then the other is required.
- 2 At least one of M1005 or M1004 is required.

Semantic Notes:

- 1 M1004 is International Maritime Organization (IMO) Code issued by Lloyds.
- 2 M1007 is used for the six-digit Numeric Manifest Sequence Number.
- 3 M1011 indicates if the transmission involves an in-bond participant. A "Y" indicates it does; an "N" indicates it does not.
- 4 M1012 is a unique identification number for the manifest assigned by the originator of the manifest with a maximum length of 15.

Notes: Once the original manifest (M1009 code 'W') has been submitted and accepted, the M10 segment becomes 'frozen'. In any subsequent amendments or actions (sets 309 M1009 code 'Y', 353, 356, 357) the mandatory and required elements in the M10 segment in the original manifest transmission must be submitted. This means if a vessel name (M1005) were submitted in the original manifest it is required in any subsequent amendments or actions. If an IMO Lloyds Vessel code (M1004/M1010) were submitted in the original manifest it is required in any subsequent amendments or actions. If both the vessel name (M1005) and the IMO Lloyds vessel code were submitted in the original manifest they are required in any subsequent amendments or actions.
