Entry Summary Status Notification - Introduction

The Entry Summary Status Notification message is a new ABI response message generated from Customs and Border Protection's (CBP) ACE entry summary processing, from CBP manual review of entry summary and related information, or from an action taken by CBP with agreement or request from the entry summary filer. This message will only be sent to ACE ABI filers for those entry summaries filed in ACE.

Filers may receive an Entry Summary Status Notification message indicating that additional documentation is required, an entry summary has been rejected, canceled, or inactivated, or that documentation has been received by CBP. In addition, filers will receive an Entry Summary Status Notification message whenever the liquidation date for an entry summary is changed. Filers will also receive an Entry Summary Status Notification message as a result of Quota processing for Quota entry type entry summaries.

Please see the description of the E1-Record layout for the specific entry summary status disposition type codes for an explanation of the actions being taken or requested.

Input: There are no input records for entry summary status notification messages.

Output: Record Identifier E1 is an entry summary status notification output record that provides data to identify the entry summary for which an action has been taken or for which information is requested.

Record Identifier E2 is an entry summary status notification output record which, depending upon the source of creation, may contain information identifying the CBP user, his/her telephone number, and/or the unique action identification number assigned to this request.

Record Identifier E3 is a conditional entry summary status output record which, if present, will contain remarks from a CBP user. This record may be repeated.

Record Identifier E4 is a conditional entry summary status output record which, if present, will present Quota status information for each Quota line in the Entry Summary. A UC will be returned for CBP Quota when the quota request is either accepted or rejected.

Record Identifier E4 is also used to present USDA License status information if there are issues with a USDA License on a line. If there are no license issues, a UC will not be returned.

Record Identifiers SO70- SO71, and SO72 are used to convey PGA processing status information for when the PGA dataset was submitted on an Entry Summary Create/Update (AE) transaction and there is no conventional entry on file (i.e., an expedited release).

The application identifier in Record Identifier B is UC. For additional information on Record

Identifier B, refer to the “*ABI Batch & Block Control*” chapter of the ACE ABI CATAIR.

Record Layout Key: A new description of the contents of each column of the record layouts has been developed for ACE. Please refer to ACE ABI CATAIR Appendix Q for a description of this new record layout key.
