Compared to other major airports ...

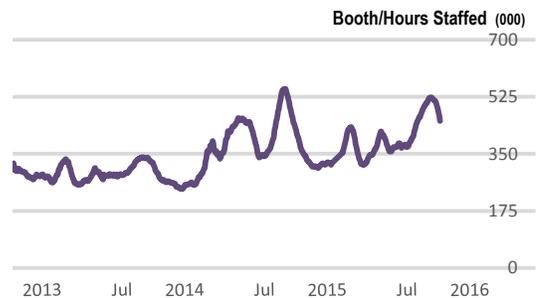

Shorter waits despite more traffic and fewer booth hours

- Travel is up 12% at Houston Intercontinental.** Traveler volume at Houston has increased 12% compared to last year. Average daily flights have increased to 114 from 111. Today, 43% of IAH's passengers are confirmed with Global Entry and APC.
- Booth hours decreased.** Booth hours have decreased by 2% from 418 hours last year to 409 hours this year. The decrease in booth hours has not led to longer waits, due to better matching of booth openings with traffic demand.
- Wait times are 10% lower despite higher volume.** Year to date, Houston's average wait is down 2.1 minutes (from 21 minutes last year to 18.9 minutes this year), despite more traffic and fewer booths. Houston has been doing a better job of staffing booths to meet demand throughout the day.
- Cycle time virtually unchanged.** Although APC and Global Entry growth has increased by 19%, average cycle time (69.9 seconds) this year is virtually unchanged from a year ago.

Traveler Volume ... strong growth in 2015

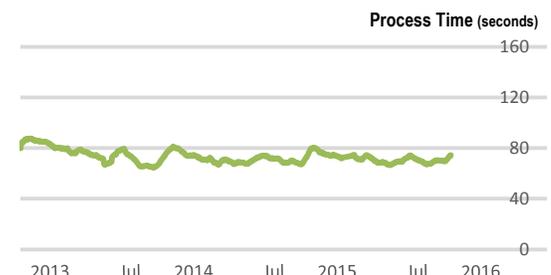

Staffing ... 2% fewer booths staffed compared last year

Wait Time ... trending down since 2014

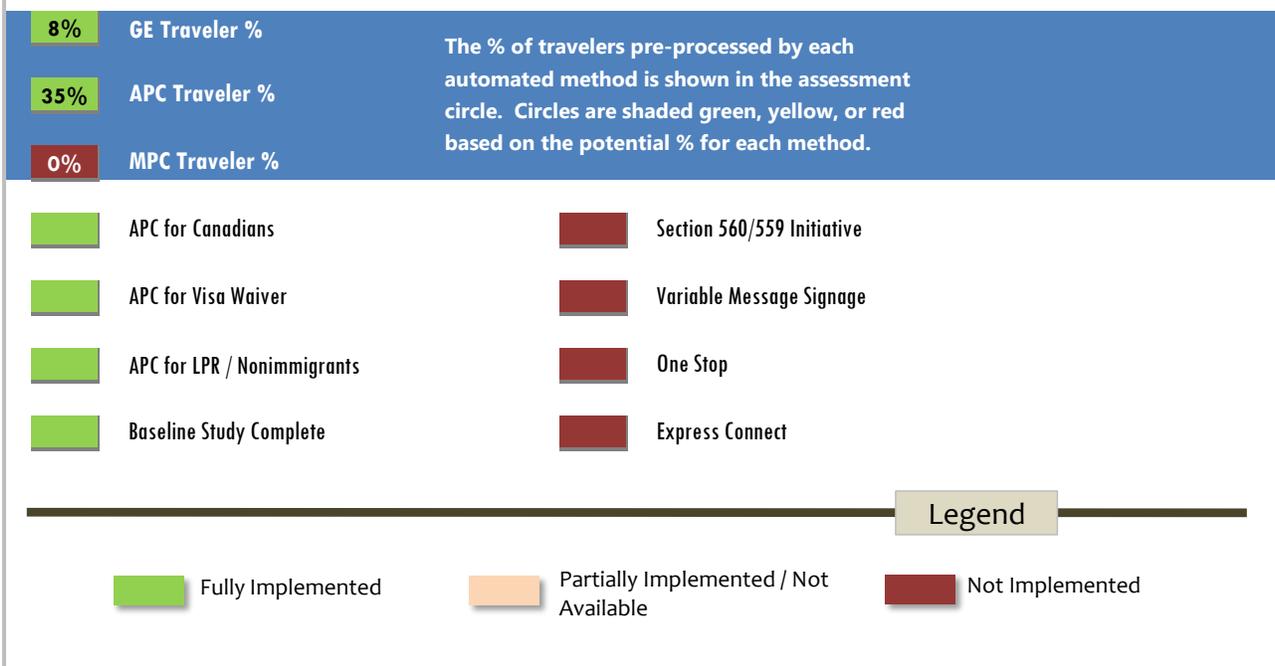

Cycle Time ... slightly trending down

Best Practice Inventory

Houston Best Practice Assessment: Houston has implemented many of the available best practices. Most notably, Houston has utilized APC and Global Entry. Today, 43% of passengers are processed by automated technologies like Global Entry and APC. APC is available not only to US Citizens, but also Canadians, Visa Waiver country travelers, and LPRs.

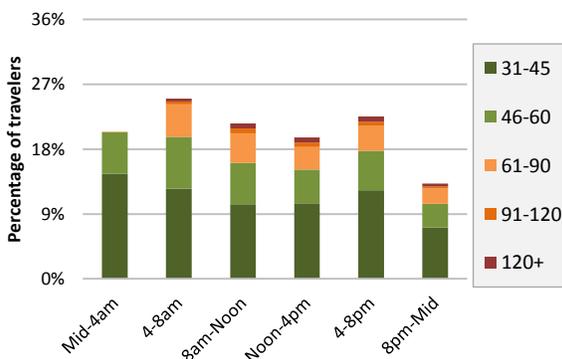

Many innovative practices, technologies, and programs are available to make international air passenger processing more efficient and reduce congestion at airports. If all practices are implemented, an airport may reduce wait times as much as 50 percent compared to not implementing any best practices. A green "assessment circle" indicates the practice is properly and fully implemented; Red means the practice is not in place; and Orange indicates implementation is limited and achieves less than intended results.

22% of passengers wait more than 30 minutes

Year to date, approximately 5% of Houston passengers wait more than 1 hour, approximately 22% of passengers wait more than 30 minutes. Between the hours of 4am to 8am, 25% of passengers wait more than 30 minutes.

% Passengers Waiting More than 30 Minutes

IAH staffs well to peak traffic

Nearly 65% of daily passengers arrive between Noon and 8pm. By staffing up to 32 booths during this time period, average waits are kept in check and close to the daily average. The longest waits are from 4am to 8am when passenger volume is less than 460 per hour.

Intraday Volume, Wait Times, and Booth Hours
