Compared to other major airports ...

Faster processing reduces wait times

- **Travel is up slightly at Detroit Airport.** Traveler volume at DTW (year to date) has increased 2% compared to last year. Today, 51% of DTW's passengers are confirmed with Global Entry and APC, up from 22% last year.
- **Wait times significantly reduced.** A drastic increase in automated solutions has helped reduce average wait times, despite an increase in traffic, and reduction in booth hours. The average wait time decreased by 9%, from 17.7 minutes last year to 16 minutes this year.
- **Fewer booths opened.** Booth hours have decreased by 13%, from 138 hours last year to 120 hours this year. Due to passenger participation in automated systems (51%), this has impacted the wait time.
- **Much faster processing.** Average cycle time decreased by 10.9 seconds (14%), resulting in an increase in max hourly throughput of 7.5 passengers an hour.

Traveler Volume ... slow growth since 2014

Booth Hours ... downward trend since mid 2014

Wait Time ... reduced compared to last year

Cycle Time ... downward trend

Best Practice Inventory

DTW Best Practice Assessment: DTW has implemented many of the available best practices. 51% of DTW passengers are now processed by APC and Global Entry indicating progress and improvement. APC is available at DTW not only to US Citizens, but also Canadians, Visa Waiver country travelers, and Lawful Permanent Residents.

Many innovative practices, technologies, and programs are available to make international air passenger processing more efficient and reduce congestion at airports. If all practices are implemented, an airport may reduce wait times as much as 50 percent compared to not implementing any best practices. A green "assessment rectangle" indicates the practice is properly and fully implemented; Red means the practice is not in place; and Orange indicates implementation is limited and achieves less than intended results.

15% of passengers wait more than 30 minutes

While very few Detroit passengers wait more than 1 hour (about 2%), approximately 15% of passengers wait more than 30 minutes. Between the hours of 8am to Noon, 25% of passengers wait more than 30 minutes.

% Passengers Waiting More than 30 Minutes

Wait time is the highest from 8am to Noon

Detroit is busiest between Noon and 4pm, when over 430 passengers arrive per hour. An average of 11 booths per hour are staffed during this time, and average wait is 16 minutes. From 8am to Noon, only 151 passengers arrive per hour, but average wait is 20 minutes since only 5 booths are open; opening more booths during 8am to Noon could greatly reduce DTW average wait.

Intraday Volume, Wait Times, and Booth Hours
